

Daily Oil

Oily Zealots!

Hypocritical journalists at the Daily Mail rain misinformation on the first real efforts by a UK Government to transition from fossil fuels to clean, green, cheap energy. In a comment piece by the Mail, they brand Ed Milliband an eco-fanatic for taking climate breakdown and the threat to public safety seriously.

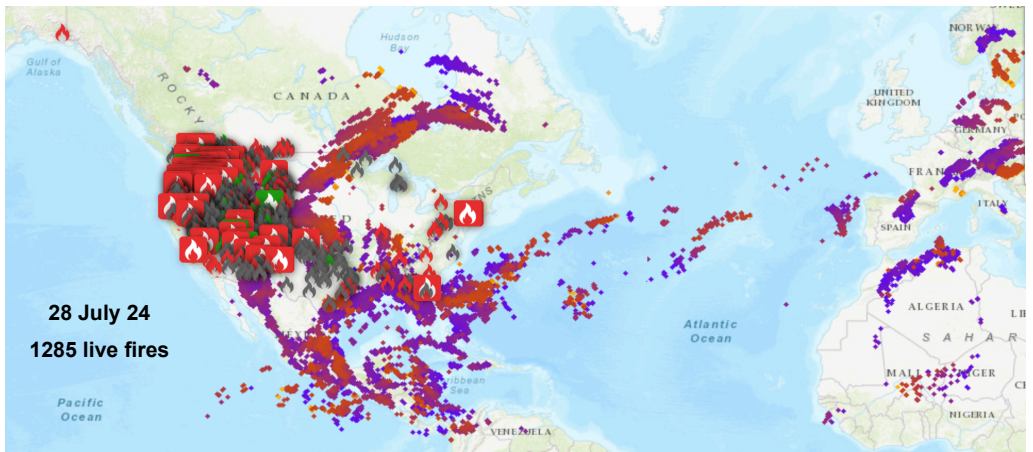

DAILY MAIL COMMENT: Sir Keir Starmer's green dream is just a lot of hot air

By DAILY MAIL COMMENT

PUBLISHED: 01:36, 26 July 2024 | UPDATED: 01:52, 26 July 2024

In the same piece they claim that: ‘The Mail fiercely believes in the duty to safeguard the planet for our children. We are proud Britain leads the way in tackling the potential threat of climate change.’

In the UK, farmers have had real crop reductions due to extreme rainfall. This year the US has suffered over 27,000 wildfires covering 5,800 square miles. This is no potential threat!

Please turn over for a solution

The solution to schizophrenic journalism is fairly simple.
The Daily Mail Group includes the New Scientist!
Here is a selection of recent environmental pieces by the New Scientist...

Risk of mass deaths as heatwaves start to pass survivability threshold

Between 1.5 and 2°C of global warming will lead to heatwaves so extreme that healthy people can't survive outdoors for long, in areas where people aren't used to extreme heat

Environment

One of Earth's major carbon sinks collapsed in 2023

Forests and other land ecosystems emitted almost as much carbon dioxide as they absorbed in 2023 – if this persists it will be much harder to restrict global warming to agreed targets

Leader and Environment

In the race to ramp up renewables, we can't ignore heat storage

Governments must step up if we are to make good on Thermal Energy Storage's promise as a cheap and easy way to help tackle wind and solar power's intermittency problem

The New Scientist is in the same building as the Daily Mail.

Imagine if Daily Mail journalists knocked on the door of the New Scientist to properly inform themselves of the science.

The argument is, of course, that the Daily Mail Group provides a wide spectrum of publications, facts and opinions. The problem is that scientific data and evidenced facts are not given as much credibility as the opinions of individual Daily Mail journalists who appear to work in the interests of the fossil fuel industry.

The Daily Mail should have noticed that the last Government lost the election because they turned their back on green policies and the fact that the vast majority of the British public want more climate action, not less.

If you truly *'believe in the duty to safeguard the planet for our children'*, take a look at the extreme weather happening right now, and support efforts to properly inform the public and to transition away from the fossil fuel era.
